

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

### 3 Configuring SAP Solution Manager

You configure SAP Solution Manager by:

- using transaction `SIC200_0010` for the initial and basic settings configuration for SAP Solution Manager and all managed systems.
- using transaction `SIC200_0020` for Root Cause Analysis configuration and technical monitoring configuration.
- using transaction `SIC00` for extended capabilities configuration.

Some capabilities are available at the early integration. Actual tasks for some of these third party products must be performed. This situation depends on dependent SPC activities. The following sections give an overview of these topics.

#### 3.1 Automatic Basic Settings Configuration

You can configure your basic settings with the basic settings wizards.

**Note**  
Automatic basic settings configuration can also be used when upgrading the Solution Manager system. This wizard configures all main settings in a guided procedure. The automatic configuration is accessed via a Web Dynpro application which is called by transaction `SIC200_0010` in the SAP Solution Manager Configuration work center. All settings for this Web Dynpro application are made during the installation of SAP Solution Manager. The configuration consists of three main parts with individual steps:

- System Preparation**  
You prepare the SAP Solution Manager system for further configuration by creating according configuration items, configuring all necessary settings for your system landscape as for instance connecting user and Java.
  - Note**  
On users, see security guide for SAP Solution Manager on the Service Marketplace ( <http://service.sap.com/Products%20Components%20SAP%20Solution%20Manager%20releases> ).
- Basic Configuration**  
You configure all basic settings to ensure that all basic functionality runs immediately, see as well section Basic Technical settings for Basic functions. In addition, you create a project and a related solution.
- Managed System Configuration**  
You create all necessary connections for from managed systems.
  - Note**  
Authorizations for SAP Solution Manager RFC users as of SPO0.
